The enzymes of the invention containing the conserved catalytic regions (such as AAW04913) exhibit improved performance, e.g. 50 times higher performance, compared to multiple domain enzymes. The enzymes can be used for the treatment of fabrics or textiles, preferably for preventing backstaining, for bio-polishing or for stone-washing cellulosic fabric. They can also be used to provide colour clarification for laundry. The enzymes can also be used for the degradation or modification of plant material, such as cell walls. They can also be used in the treatment of paper pulp preferably for debarking, defibration, fibre modification,

This represents a monocomponent endoglucanase. This is a cellulolytic conzyme belonging to the fungal species Thielavia terrestris. This can be cused in the process of invention of providing a pair of jeans made from CQ dyed twill fabric that has localised variations in the colour density of the fabric. The process involves providing the jeans with a stone-washed CQ arbraded look, where the variation corresponds to a delta remission CQ value (Delta R) higher than 11, and the reflection of a first area of the jeans fabric is less than 12 percent. The process comprises selecting CQ the desired textile cutting pattern for jeans garment, positioning the pattern onto newly manufactured dyed twill fabric, cutting the jeans CQ garment parts, sowing the pair of jeans, optionally subjecting the pair CQ of jeans to a desizing treatment, and subjecting the pair of jeans to a desizing treatment, and subjecting the pair of jeans to a desizing treatment, and subjecting the pair of cabrasion treatment with an efficient amount of a cellulolytic enzyme in CQ and aqueous medium essentially free of bleaching chemicals. The abraded CQ content are stitching is different from the abraded look far from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                 which comprises the promoter, signal sequence and/or terminator regulatory sequences from the NCE1 or NCE2 gene of H. Insolens. These are available in the plasmids pM3-1 (Escherichia coli JM109/pM3-1, FERM BP-5971) (for NCE1) and pM14-1 (E. coli JM109/pM14-1, FERM BP-5972) (for NCE2). The vector also contains a marker gene such as an antibiotic resistance gene (e.g. the destomycin resistance gene from Streptomyces rimofaciens). Proteins which can be expressed using this system include cellulase, amylase, lipase, protease, phytase and other enzymes. Specific expression vectors of the invention are pMXD01 (for Humicola NCE3 cellulase gene), pEGD01 (for Humicola NCE4 cellulase gene) and pIED02 (for Humicola NCE4 cellulase gene). The expression system allows the efficient production of proteins and peptides in a Humicola host. Using the expression system high amounts of protein (>4.5 g/l) can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents the Humicola insolens cellulase NCE4 protein from the present invention. The present invention describes a method for the mass production of proteins and peptides in Humicola species, especially in Humicola insolens, using an expression vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mass production of proteins and peptides in Humicola species expression vector containing the promoter, signal sequence and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 1998-120786/11.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      24-JUL-1996;
                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Example A6; Page 46-48; 63pp; Japanese

                                                                                                                                                                                                                                                                                                                             The cellulase isolated from H.insolens has mol.wt. ca. 43kD by SDS-PAGE and an isoelectric point of ca. 5.1. The enzyme can bused in detergents for softening, soil removal and colour clarification. It can reduce the harshness of cellulose-contg.

The compsn. gives a detergent with good cleaning and softening performance due to the synergistic effect of the ammonium and cellulase components. The cellulase is a homogeneous endoglucanase component which is immunoreactive with an antibody raised against a cellulase purified from Humicola isolens DSM 1800. See also AAR25429.

```

enzyme;

endoglucanase

```
The sequence is that of an endoglucanase (alkaline cellulase) from Humicola insolens which is used with a polyvinylpyrrolidone (PVP) in a laundry detergent compsn. The action of the PVP and the endoglucanase in fabric colour maintenance upon laundering is superior to the sum of the individual actions of both these ingredients.

As a detergent additive, it has a higher degree of specificity then Bacillus lentus serine protease. The term "higher degree of specificity" is defined as a protease which conditions degrades human

The cellulase may be an endoglucanase enzyme derived from Hunicola insolens (AAQ49941) or Fusarium oxysporum (AAQ49942). The combination provides a higher than additive softening performance and excellent colour rejuvenation and whiteness maintenance for fabrics.

The enzyme is a cellulase enzyme used in the liquid detergent composition of the invention. The detergent composition and the invention. The detergent comprises an anion surfactant, a cellulase enzyme and a cellulase stabilising amount of an amine of the formula RIRZRN; where RI and RZ are independently H or a C2-C9 alkyl chain, and R3 is a C2-C9 alkyl chain or cyclohexyl or cycloheptyl. The amine prevents the cellulase enzyme from becoming degraded. The composition is used as a liquid detergent, and has long term stability, it is applicable to the protection of an cellulase and can be used in the presence of proteases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              H. insolens endoglucanase enzyme

                                                                                      The Humicola insolens DSM 1800 alkaline endoglucanase Carezyme (AAR88471), a derivative of a 43 kDa cellulase, is expressed in non-toxic, non-toxigenic, non-pathogenic, protease-deficient recombinant Fusarium graminearum ATCC 2034 carrying plasmid pDM151. This plasmid includes the Carezyme gene (AAT10182) operably linked to promoter and terminator (AAT10184-85) sequences of the Fusarium oxysporum trypsin-like protease SP387 gene. Recombinant enzyme is produced at levels of 6.0 g/l host cell;

Patent No. 6322595

GENERAL INFORMATION:
APPLICANT: Boyer, Stanton L
TITLE OF INVENTION: Detergent Composition Comprising Two Cellulase
TITLE OF INVENTION: Detergent with and without a Cellulose-Binding Domain
FILE REFERENCE: 6191 Sequence Listing (8 Sequences)
Patent No. 6322595
CURRENT FILING DATE: 1999-01-29
EARLIER APPLICATION NUMBER: 05/09/230,665
CURRENT FILING DATE: 1996-07-30
NUMBER OF SEQ ID NOS: 8
SOFTWARE: PatentIn Ver. 2.1
SEQ ID NO 2
LENGTH OF SEQ 10 SOFT SECTION OF SEQ ID NOS: 8
SOFTWARE: PatentIn Ver. 2.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Qy
